MOHAMMED HADI

Manipal, Karnataka, India | +91 9353766821 | mhdhadiabdullah@gmail.com | github.com/mhdhadi2005 | LinkedIn

SUMMARY

Data Science & Engineering student experienced in designing, developing, testing, and debugging software systems in Python, Java, C/C++, and JavaScript. Builds and deploys backend/distributed systems, iterates on system design from stakeholder feedback, and ships to cloud infrastructure (Azure, AWS, GCP) using Docker and Kubernetes.

EDUCATION

Manipal Institute of Technology (MIT Manipal) *07/2023 – Present*

Bachelor of Technology, Data Science and Engineering — Manipal, India

TECHNICAL SKILLS

Languages: Python, Java, C, C++, JavaScript, TypeScript, SQL

Backend / Systems: FastAPI, Spring, Node.js, Flask, RESP/TCP protocol implementation, MongoDB, MySQL, Redis

Engineering Practice: Pandas, NumPy, Scikit-learn, XGBoost, LSTM • Docker, Kubernetes (Helm), Git/GitHub Actions (CI), technical documentation, Azure, Google Cloud, AWS

PROJECTS

redis-java — Java Redis Server Implementation — *Java, Spring, Docker, Kubernetes/Helm*

- Designed and implemented a Redis server from scratch in Java, writing a custom RESP protocol parser/serializer and a multi-client TCP server handling PING, SET, GET, INCR, DEL, and INFO — debugging concurrency edge cases to keep command handling correct under multiple simultaneous clients.
- Engineered master/replica replication for data reliability, then containerized and deployed the service with Docker and a documented Kubernetes Helm chart for reproducible local and cluster environments.

QuantAI — Quantitative Trading Research System — *Python, Pandas, NumPy, Scikit-learn, XGBoost, LSTM, FastAPI*

- Designed and built an AI-assisted quantitative trading system over historical OHLCV data, comparing XGBoost/Random Forest classifiers against LSTM time-series models with engineered technical-indicator features.
- Validated model reliability with a time-aware train/test split and backtesting framework to prevent lookahead bias, then deployed inference behind a FastAPI service for real-time, low-latency predictions.

My Daily Garden — Newsletter Gamification System — *Next.js, Beehiiv API, WooCommerce Integration*

- Gathered requirements from a non-technical stakeholder and iterated the system design — moving from a manual click-to-interact mechanic to passive engagement tracking — before architecting the build.
- Architected a four-table database schema and a Next.js + Beehiiv merge-tag integration, documenting the data flow between the newsletter platform, the streak/points engine, and the WooCommerce backend.

ai-cookbook — AI Engineering Reference Library — *Python, LLM APIs, MCP*

- Authored and documented a copy/paste-ready reference library of AI system patterns — agent design, agentic/hybrid RAG pipelines, and structured-output workflows — for reuse across future projects.
- Wrote a full Model Context Protocol (MCP) crash course covering server implementation and client integration, plus OpenAI API examples (structured outputs, Assistants, Whisper).

PROFESSIONAL EXPERIENCE

Web Development Intern, Montagu Publishing *01/2026 – Present*

Remote

- Build and iterate landing pages across the company's newsletter brands (including Devoted Grandma) using WordPress, Astra, Elementor, and Beehiiv, shipping distinct page themes and syncing lead-capture forms to Beehiiv's Enterprise account.
- Diagnosed and fixed a recurring CSS full-bleed layout bug where the standard viewport-breakout technique (100vw/-50vw) broke inside Astra/Elementor's nested containers, replacing it with a container-relative fix now reused across pages.
- Built and maintain a structured, single-variable A/B testing library for lead-magnet landing pages — exit-intent popups, sticky CTAs, social proof — designing each test from direct stakeholder feedback rather than full-page redesigns.
- Structure page layouts and iterate copy/design against funnel and performance goals for a niche US-based audience.

Regional Head for Business Development, AIESEC *01/2025 – 12/2025*

Manipal, India

- Orchestrated B2B collaborations and sponsorship deals, applying negotiation skills and data-driven insights to hit national and regional growth targets.
- Led and managed a Business Development team, building a high-performance culture through coaching, delegation, and strategic alignment with organizational goals.
- Directed end-to-end national and international BD campaigns while mentoring cross-functional teams and coordinating with external stakeholders.

AWARDS & CERTIFICATIONS

- 5th (National), Big Bull Trading Competition — Master's Union x CaseUnion | Top 3, Sharjah Chamber Award for Innovators | Microsoft Azure for Data Engineering | Python for Data Science, AI & Development — IBM
